Website Compliance & Risk Audit

[REDACTED]

July 22, 2026 05:27 UTC

F

44 / 100
Site Health Score

Prepared by StellaAudits · [REDACTED EMAIL] · [REDACTED PHONE]

Executive Summary

This report scanned [REDACTED] across three risk categories: legal exposure from accessibility gaps, visitor loss from search-visibility issues, and security/liability concerns. The site scored 44 / 100 (F), based on 17 total findings weighted by severity.

1	3	10	3
High Priority	Medium Priority	Low Priority	Informational

Legal Risk (ADA / Accessibility) — 3 findings

Visitor Risk (SEO & Structure) — 10 findings

Security & Liability Risk — 4 findings

This report is an automated preliminary scan. It is not a certified accessibility audit, a penetration test, or legal advice. Findings should be independently verified before being used as the basis for legal or compliance claims.

Legal Risk

Page has no top-level heading (H1)

Medium

Why it matters:

There's no <h1> element, so screen-reader users navigating by heading have no clear entry point into the page's content.

Recommended fix:

Add exactly one <h1> that describes the main content of the page.

Reference: WCAG 2.1 Success Criterion 1.3.1 (Level A)

Data table without header cells

Medium

Why it matters:

A <table> was found with no <th> header cells.

Recommended fix:

Use <th> for header rows/columns, or scope="col"/"row" attributes.

Reference: WCAG 2.1 Success Criterion 1.3.1 (Level A)

Color contrast not automatically verified — Info

Why it matters:
Text/background color contrast requires a rendered page and wasn't measured in this automated pass.

Recommended fix:
Manually spot-check body text and buttons against WCAG AA contrast ratios (4.5:1 normal text, 3:1 large text).

Reference: WCAG 2.1 Success Criterion 1.4.3 (Level AA)

Visitor Risk

Missing mobile viewport tag — High

Why it matters:
Google uses mobile-first indexing -- without a viewport tag the site likely renders as a tiny, unusable desktop layout on phones, which is the majority of local-business search traffic.

Recommended fix:
Add <meta name="viewport" content="width=device-width, initial-scale=1">.

No H1 heading for search engines to key off of — Medium

Why it matters:
Search engines use the H1 as a strong signal for the page's main topic.

Recommended fix:
Add one clear, keyword-relevant H1 per page.

[REDACTED: THRESHOLD_DETAIL] — Low

Why it matters:
Titles that are too short waste an opportunity to describe the page; titles [REDACTED: THRESHOLD_DETAIL] get truncated with "..." in search results.

Recommended fix:
Aim for [REDACTED: THRESHOLD_DETAIL] that describe the page and include a relevant keyword and business name.

Missing canonical tag — Low

Why it matters:
Without a canonical URL, sites that are reachable multiple ways (with/without www, with tracking parameters, etc.) risk being treated as duplicate content, diluting search rankings.

Recommended fix:
Add a self-referencing canonical link tag to each page.

No structured data (schema.org) found — Low

Why it matters:
No JSON-LD structured data blocks were detected.

Recommended fix:
Add LocalBusiness JSON-LD structured data with name, [REDACTED ADDRESS], phone, and hours.

No LocalBusiness structured data found — Low

Why it matters:
No schema.org LocalBusiness (or subtype like Restaurant, Store, Attorney, etc.) JSON-LD block was found on the page.

Recommended fix:
Add a LocalBusiness (or more specific subtype) JSON-LD block with name, [REDACTED ADDRESS], telephone, and openingHours.

No phone number found in visible page text — Low

Why it matters:
No recognizable phone number pattern was found anywhere in the page's visible text.

Recommended fix:
Display a phone number prominently, ideally in the header or footer so it appears on every page.

No embedded Google Map found — Low

Why it matters:
No Google Maps iframe embed was found on the page.

Recommended fix:
Embed a Google Map showing the business location, typically on the homepage or a dedicated contact/location page.

No favicon found — Low

Why it matters:
No <link rel="icon"> (or similar) tag was found.

Recommended fix:
Add a favicon (most site builders/CMS platforms support this with a single upload).

[REDACTED: INTEGRATION_DETAIL] — Info

Why it matters:
No PageSpeed Insights API key is configured, so this pass was skipped.

Recommended fix:
Add a free Google PageSpeed Insights API key in config.json to enable it (see README).

Security Risk

Missing [REDACTED: HSTS] header — Low

Why it matters:
Without HSTS, a visitor's first request to the site (or a link that points to the http:// version) can be intercepted before the redirect to HTTPS happens.

Recommended fix:
Add a Strict-Transport-Security header (e.g. "max-age=31536000; includeSubDomains").

Missing [REDACTED: CSP] header — Low

Why it matters:
CSP is a browser-enforced safety net that limits the damage if a malicious script ever gets injected into the page (e.g. via a compromised third-party plugin).

Recommended fix:
Add a Content-Security-Policy header appropriate to the scripts/styles the site actually uses.

Missing [REDACTED: SECURITY_OPTION] header — Low

Why it matters:
Without it, some older browsers can be tricked into executing a file as a different, more dangerous content type than the server intended.

Recommended fix:
Add X-Content-Type-Options: nosniff.

[REDACTED: ESCAPING_FINDING] — Info

Why it matters:
Good news -- this is exactly the behavior you want and rules out the most common reflected-XSS pattern for this field.

Recommended fix:
No action needed for this field.

Methodology note: This audit was generated by an automated tool that performs automated analysis of publicly available website information. Where a PageSpeed Insights API key is configured, a subset of findings (marked accordingly) come from a real Chrome-rendered measurement rather than static analysis. Automated scans can produce false positives/negatives; a manual review is recommended before relying on these findings for legal, compliance, or contractual purposes.

What Happens Next

The issues in this report are common, fixable, and worth addressing before they cost you visitors, search ranking, or legal exposure. None of this requires rebuilding the site from scratch — most items above are targeted, scoped fixes.

If you'd like help prioritizing or fixing any of these, get in touch below.
